

Life Skills of Engineering students and its Impact on Decision Making

Life Skills is one of the human techniques, which may influence the individual to achieve the expectations during his/her life time. The adolescent stage is started after completion of secondary education. This is crucial stage of physiological and psychological changes among the adolescents either in a positive or negative way of thinking. The investigator of the present study is interested to probe into the Life Skills of Engineering College Students as it is included in their syllabus. This book was written with an objective to study the significant difference between utilization of Life Skills and best and most informed decisions in terms of demographic variables like Gender, Locality, Community, Subject of Study and Type of Management in the Engineering College Students. The aim of this study is to find the significant relationship between the dimensions of Life Skills and study has opted to know the Life Skills of Engineering College Students in the North Coastal Districts of Andhra Pradesh i.e., to find the relation of independent variable life skills to the dependent variable best informed decisions
